

SketchUp Extension Installation Procedure

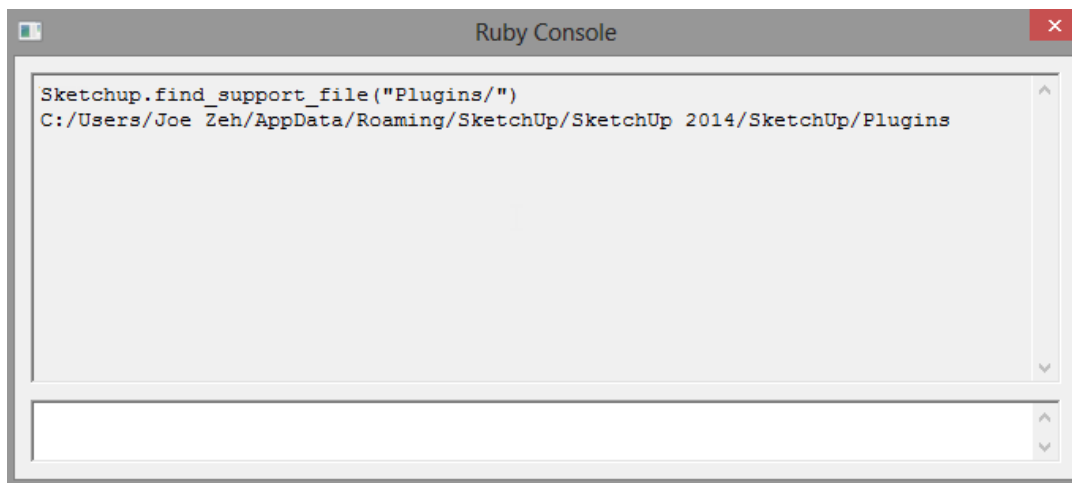

Locating Your Plugins Folder

You don't need to know where your Plugins folder is to install Layers Management, but you might want to know where it is to verify you installed it correctly. If you don't know where it is you can find it using the Ruby Console. To open the Ruby Console go to **Window > Ruby Console**. The Ruby Console will appear. In the white area at the bottom copy and paste or type the following line exactly:

```
Sketchup.find_support_file("Plugins/")
```

It should look like the image at left. Press the Enter key on the keyboard and you will see the results shown in the image below. Note that I had to drag the right side of the window to enlarge it so the folder location would appear all on one line. Copy and paste the folder location and save it for future reference. You might also want to create a shortcut on your desktop pointing to the Plugins folder.

Installation of an Extension

IMPORTANT: Follow These Installation Instructions Carefully

There are several ways of installing an extension. For example you might get one directly from the Extensions Warehouse, in which case it is automatically installed for you. If you downloaded a .rbz installation file from some other source such as the CabWriter website, use one of the two following procedure depending on your SketchUp version.
